PROFESSIONAL SUMMARY

Results-driven Azure Data Engineer with over 5.7 years of experience, including more than 3.5 years specializing in Azure cloud technologies. Expertise in designing, developing, and maintaining scalable data pipelines and ETL solutions using tools such as Azure Data Factory, Azure Databricks, PySpark, and SQL. Proficient in managing structured and semi-structured data from diverse sources into Azure Data Lake and Snowflake to enhance analytics and reporting capabilities. Strong understanding of data warehousing principles, performance optimization techniques, and innovative cloud-based data engineering solutions.

SKILLS

- Azure Data Factory
- PySpark
- Python
- Unix Scripting
- SQL Server
- ETL development
- Azure Databricks
- SQL
- Snowflake
- Oracle
- Power BI
- Data pipeline design

WORK HISTORY

October 2020 - Current

Cognizant Technologies Solutions - Senior Data Engineer, Kochi, India

- Developed scalable ETL/ELT pipelines using **Azure Data Factory** and **Azure Databricks** to process large-scale pharmaceutical domain datasets.
- Built **PySpark** notebooks for data cleansing, transformation, aggregation, and loading into curated layers.
- Implemented **Medallion** Architecture (Bronze, Silver, Gold) using Delta Lake in **Azure Data Lake Storage**.
- Created incremental and SCD Type 1/Type 2 data pipelines using Delta tables.
- Integrated data from APIs, FTP, SharePoint, SQL Server, and flat files into Azure cloud storage.
- Developed **ADF** pipelines to extract data from on-premises SQL Server using Self-Hosted Integration Runtime.
- Migrated historical data from SQL Server into **Azure Data Lake Storage Gen2** in Parquet and Delta formats.
- Optimized Spark jobs and improved pipeline performance by partitioning, caching, and efficient joins. Improved pipeline execution performance by 40% through Spark optimization techniques.
- Configured parameterized pipelines, triggers, linked services, datasets, and monitoring in ADF.

- Worked with external tables, stages, and file formats in Snowflake.
 - Implemented CI/CD deployment using Azure DevOps and ARM templates.
 - Monitored data pipelines and resolved production issues with minimal downtime.
 - Worked closely with cross-functional teams, including business analysts, data architects, and QA teams, to gather requirements, perform impact analysis, and deliver solutions that met business needs.
 - Providing support to team members on the technical side to achieve the project timeline.
-

ACCOMPLISHMENTS

- Designed and implemented **end-to-end data pipelines using Azure Data Factory**, ingesting data from SQL Server, APIs, and flat files, improving data availability by **40%**.
 - Built **incremental and full-load ETL pipelines** with ADF, reducing data processing time by **30%** through optimized triggers and partitioning.
 - Automated data ingestion workflows with **event-based triggers**, eliminating manual intervention and reducing failures by **25%**.
-

CERTIFICATIONS

- DP-900: Microsoft Azure Data Fundamentals
- Databricks Certified Data Engineer Associate
